

REMARKS

Entry of the foregoing amendments and reconsideration of this application is respectfully requested. No additional fee is required because the claims constitute three independent claims and a total of twenty claims, which were paid for in the filing fee. Claims 1 and 38-56 are in the application.

Jacobs et al. U.S.P. 6,225,995 (cited in the parent application) teaches a server creating and updating a URL with state variable data. The URL is sent to a client computer with the data, acting as a tag as well as an address. The state variable data is not updated by the client computer, it is simply attached. When the data is processed as desired by the client computer and sent back to the server, the state variable data goes with and acts as a tag used by the server to go back to where it left off previously. The state variable data is then updated by the server and re-attached if sent back to the client computer.

SUMMARY

None of the references cited in the parent application disclose apparatus or methods similar to applicant's claimed structure and since none of the applied references can achieve the functions of the present invention, applicant believes that claims 1, and 38-56 are in condition for allowance.

Should there be any questions or remaining issues regarding the foregoing, Examiner is cordially invited to telephone the undersigned attorney for a speedy resolution.

Respectfully requested,

A handwritten signature in black ink, appearing to read "Robert A. Parsons", written in a cursive style.

Robert A. Parsons
